Dell Inspiron notebook, Will not load to recovery console. It gets to the point that it asks which OS to you want. I type 1, enter. There is hard drive activity and then it stops. Will not do an install new or repair because it will not get to the second instal screen. It stops when looking for installed windows. Will not boot in safe or normal mode. Checked the hard drive in another computer. It is very readable. Had some low risk adware but no viruses. Still won't boot or repair. I am now running a defrag. What else can I do? Thank you.
