Charlie,

Perhaps the event log (system) would provide more clues on why the services stopped suddenly?

I wish that were the case Ramesh, but no I did not do this. This is a spontaneous event that has completely baffled me. I did run Adaware and spybot and my antivirus all in the safe mode, as well as the MS malicious software removal tool, and nothing was found.

I finally set to "automatic" literally every service that I could, and then started them, and have now rebooted a half dozen times and the services seem to stay as I have configured them.

This is very puzzling. The only other clue I have is that some services would not start, citing a Win32 error when I request dependencies.

Charlie
