Hi Maggie,

= Try these steps according to your error message:

REGISTERED JIT DEBUGGER IS NOT AVAILABLE. AN ATTEMPT TO

You need to see if you have the NET Framework 1.0 or 1.1 installed, how to do that try this:

Click Start >> Control Panel >> Add/Remove Programs ( check show all updates at the top corner) and look for NET. Framework 1.0 or 1.1 and uninstall it of it there.

If you don't have it then try to install from here:

Microsoft .NET Framework Version 1.1 Redistributable Package

<http://www.microsoft.com/downloads/details.aspx?FamilyID=262d25e3-f589-4842-8157-034d1e7cf3a3&displaylan>

Reboot after installing the package.

= Come to your BACKUP.NOTIFY, do you have HP product line digital image or scanner or any product for HP that is on start Up option and causing this BACKUP.NOTIFY error message?.

Open a Run Command by click Start >> Point to RUN and on the Run command type in:

regedit click [OK] be careful what you are deleting there, if you are n't sure come back and ask what or does this belong to the HP.

[–] HKEY\_CURRENT\_USER\Software\Microsoft\Windows\CurrentVersion\Run =

Look in the Right Pane/Window for this or any running process for HP

"C:\Program Files\Hewlett-Packard\Digital Imaging\bin\backupnotify.exe" <=

Delete the running process for it.

And

[–] KEY\_LOCAL\_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Run

Look in the Right Pane/Window for this or any running process for HP

"C:\Program Files\Hewlett-Packard\Digital Imaging\bin\backupnotify.exe" <=

Delete the running process.

\*\*\* If you have the above you need to look for uninstall the HP and

Reinstall the latest driver from HP site for your product specs. \*\*\*\*

= Another cleaning process to go through:

1... First, try to clean up your caches, Internet files and delete cookies by doing this:

RE: message after start up, got worse

Click Start >> Control Panel >> Double click Network and Internet Connections >> Double click Internet Options.

On the IE properties windows you will see these Tabs:

General | Security | Privacy | Content | Connections | Programs | Advanced

Under General Tab clear your History, Internet Files and Cookies.

Then click on Advanced tab and scroll down to under the Browsing Option:

[&] Browsing

[ ] Enable Third-Party browser extensions (Req Rest) uncheck this box.

Then click on Programs Tab and click Manage Add-Ons and Disable all non Verified Add-Ons (You should Renable them later one-by-one and see the culprit and update it or remove it.

For Malwares download both these software:

[http://www.lavasoft.com/products/ad-aware\\_se\\_personal.php](http://www.lavasoft.com/products/ad-aware_se_personal.php)

<http://www.safer-networking.org> ; for Spybot S&D

Try to run Disk Clean up to do that follow these steps:

Open My Computer by double clicking it then on the C:\ partition right click it and select Properties.

On the C:\ Drive properties click on General tab then click on Disk Clean Up and make sure you check mark all boxes in the new Pop-up window.

Then Open windows explorer and delete the Temp:

C:\Windows\Temp\TemporaryInternet Files =< Delete all sub-folders in capital letters they will be here>

Reboot your computer and see if you will be able to connect.

HTH.

Let us know.

hi, how do I connect...I do not connect using VPN. its a home machine, mostly used by me, sometimes by my daughter. We're using it for research needed, work and school.

after I start it up, I go to START, choose

CONNECT TO MSN EXPLORER option, window pops up and I type my password in there.(( sometimes I am not able to type because it freezes)).

But before I try to connect to the internet I am getting that BACKUP.NOTIFY window/message and even I tried everything you guys told me – it is still there driving me crazy.

I am using NORTON ANTI VIRUS and have done all the needed updates.

AFTER I click CANCEL to get rid of this message, another window pops up saying:

REGISTERED JIT DEBUGGER IS NOT AVAILABLE. AN ATTEMPT TO LAUNCH A JIT

DEBUGGER WITH THE FOLLOWING COMMNAD RESULTED IN AN ERROR OF 0X2

(2)

PLEASE CHCECK COMPUTER SETTINGS

cordbg.exe ! a 0X500

Id reall appreciate any help.

Thanks

Hi Maggie,

Please tell us how do you connect to the Internet and are you using VPN (Virtual Private Network) on this machine and how this machine operate, is it in in a work group environment or is it a home machine?.

What anti-virus you are using?, the Update error message it could refer to the server of the Anti-virus wanted to update and causing this error.

Try this if you don't connect through a proxy or VPN:

1... Click start >> Control Panel >> Double Click Network and Internet Connections >> Double click Internet Options, on the IE Properties window you will see these Options:

General | Security | Privacy | Content | Connections | Programs  
| Advanced .

Click on Connection Tab and then click on LAN Settings Button, there make sure the Automatically Detect settings is not checked.

If you are using IPSEC or VPN try to make sure this Service started Automatically:

Open a Run Command and type in:

services.msc click [OK]

Make sure the IPSEC service is starting Manual instead of Automatically or Vice Versa if it is manual turn into Automatically.

RE: message after start up, got worse

The IPSEC it could refer to an unplugged cable to the network.

HTH.

Let us know.
