That was my fault. I should have backed up the registry. I finally got to setup with Dell's setup disc and will format the hard drive and reinstall. I have checked the sound card to be sure it is well seated and blown out the dust. I will get back to you as soon as I have reinstalled. Maybe the sound card will install properly this time..

Question: Is there such a thing as a bootable setup CD, like the floppy we used to make for Win98 and earlier?

"nass" wrote:

Hi dea,

First, it is my Recommendation to you the Kelly-korner not Joe, sorry for the trouble.

I can't see why it screwed up, but if it a clean install I will try to see the sound card is seated firmly in it's slot and clean the Dust by air compressed can or blow gently out of the Case.

Try to follow these steps for clean install and if it is expansion card, try to get the CD/DVD or Floppy for the driver and pay attention when windows install and ask for driver and you can select I have a disk , that if the sound card is n't defective for some reason!.

Here is a link to prepare yourself fro clean install:

<http://www.michaelstevestech.com/cleanxpinstall.html>

If you wish you can Boot into safe Mode by tapping the F8 and do a system restore before the registry changes took place.

HTH.

Good luck.

I went to Kelly's Korner and added line 371 to the registry...It really screwed up my computer and I didn't backup the registry(dumb me). The computer won't boot up. I don't have an A Drive, so can't use it to

Re: Internet Explorer

restart...It is a Dell computer so I'm using their CD to reinstall but I can't get to the Setup, so I can format. I can only get to where it says press ENTER to install XP, or press R to repair. If I press R, to repair, I get stuck on having to put in an Administrator's password. I press enter to get past that and it won't accept it...I've done it before, and gotten past the Administrator password, but I must be doing it wrong somehow this time... It might be awhile before I get back to you guys...but don't give up on me...LOL!!

"Dean" wrote:

went into the BIOS and listed under "Integrated Devices" was Legacy Select Options and a place to turn the sound on and off. It was off, I turned it on, but it made no difference. That was the only adjustment I could make to it, no place to disable or delete....
...I don't have an Integrated Sound card. It is a PCI Creative Sound Blaster, and is in a PCI slot on the system board. I don't understand how it (Legacy) ever got installed. Any ideas will be appreciated...

I will also try what Joe advised on Kelly's Korner. Will let you know how I do..
