This sounds like your solution.

Level Slider Stuck

I've got a laptop and I'm looking for the registry key that contains the settings for the Low Battery Alarm warning and Critical Battery Alarm (CBA) warning settings. The current slider won't let me go below 4% on the setting for the CBA.

I just replaced the battery with a new one and through experimenting, I've figured I've got several minutes of usable time after the CBA warning appears before the laptop simply shuts off. I'd like to be able to use some of that usable time and still have power enough to let the laptop hibernate before the battery dies. Ideally, I want to set the CBA to 2%, but don't know where to make the registry change.
