When I right click on an icon "open with" is no longer there.
How do I fix this?.

Try a Shift/right-click.

This does not work

It won't work with executables, but will work with most file types. What is the extension on the file you need to open with a different application?

MSInfo Document

Re: right mouse click

Here's something I found on those files:

http://groups.google.com/group/24hoursupport.helpdesk/browse_thread/thread/d420425ffce1440d/c0ccff407fde1808?

"It is created with msinfo32.exe (the system information utility), by default..

The default MSinfo document type (*.nfo) is NOT a text file, and can only be read by msinfo32, but be aware that there are other *.nfo file types that ARE text only, and are used for file descriptions, info and such like. You can search Google for "nfo viewer" for the text type viewers. "
