Dan

Does the WIN XP Pro CD include the SP2 update?

You mmight try updating the Altec Speaker driver –what model do you have?

http://alteclansing.custhelp.com/cgi-bin/alteclansing.cfg/php/enduser/std_alp.php?p_sid=CJvcF9Qi&p_lva=&p_li=&p

Dan wrote:

HI,

About the Windows CD, its an WIN XP Pro CD I used to install the OS.
I have a laptop IBM Thinkpad T41 that is about 3 years old.
There have been no hardware changes.

I believe the problem started after I plugged in a set of Altec
Lansing USB speakers. The first BS happened after that and it has been
hapening ever since...

Thanks for all of your help..

Re: Rebooting with Blue Screen

Dan

69 unsigned drivers is too many to check.

How is the inside of the computer casing in terms of dust. It never any harm do to use an Air Duster to remove dust bunnies. Dust can cause overheating http://www.elephantboycomputers.com/page2.html#Hardware_Tshoot

You did not answer this question:
What is your Windows XP CD as it is described on the face of the CD?

What is your computer make and model? How old is it?

What was the last hardware and last software added? Is there any connection timewise between making the changes and the problems starting?

Hi,

The error appears to happen after using the computer normale for a while (when started I chose last known good config) I checked the Device Manager and there are no yellow marks. After checking the drivers that are not signed I found a lot Files found: 3557. Signed Filed 2520. Unsigned 69. Files not scanned 968

Im not sure what look for in that list...Any advice,
Thanks in advance

That's a different error to the one
before:<http://msdn2.microsoft.com/en-us/library/ms795930.aspx>

How frequently is it occurring? Is it occurring
when you boot or
later?

Are there any yellow question marks in
Device Manager? Right click
on the My Computer icon on your Desktop
and select Properties,
Hardware, Device Manager. If yes what is
the Device Error code?

Try Start, Run, type "sigverif.exe" without
quotes and hit OK. What
drivers are listed as unsigned? Disregard
those which are not
checked.

What is your Windows XP CD as it is
described on the face of the
CD?

Hi
everybody,

Hi,

Re: Rebooting with Blue Screen

The error keep happening
and still no clue...
This is the latest one

Error code 100000d1,
parameter1 f78af000,
parameter2 00000002,
parameter3 00000001,
parameter4 ba1cc4bd.

Any ideas?

My
computer
has
been
rebooting
with
a
blue
screen
and
after
it
reboots
it
gives
me
a
message
which
I
have
no
clue
what
does
it
mean.
This
is
what
it
contains

Can
anybody
tell
me
what
does
it
mean?

All
help
is
greatly
appreciated!
Dan
