Whenever I plugged my MP3 player into a USB port a message box popped up asking me what action to take. I normally select "no action" and carry on. The last time I decided to select "no action" & tick the "always take the same action" box. As I did it I must have moved the mouse and now every time I plug the MP3 player in my "Sonic" program opens up.

How can I reverse this please? Is there an ini file or something I need to alter?

TIA

Rupe

Sounds like you're talking about the autoplay function. Plug in your mp3 player. Then go to My computer and right click on the drive it is in. Choose properties and then the autoplay tab. Either click restore defaults or set the options to what you want.
