SOMETIMES when selecting shut down or restart I get message "Windows is currently in the middle of a long operation. Either wait for the operation to finish, or cancel it before you quit Windows".

Windows Task Manager does not show any program running while the message is displayed and no Hard Disk activities indicated.

System also sometimes does not go into standby mode as selected in Control Panel Power Options. Hibernation is not selected.

Using WindowsXP with all updates, Office 2007, Paint Shop Pro, Acronis Backup.

Please help

John Louis
