- 1) How can one bypass the login screen and designate a default user startup?

Bypass The Windows XP Log On Screen.

To make logon an unattended process:

Click [Start] [Run] and type control userpasswords2

Click [OK]

The [User Accounts] Property Sheet displays.

On [Users] tab, clear the [Users must enter a user name and password to use this computer] check box.

Click [Apply].

Enter a user name and password that should be used to logon automatically in the dialog box that appears.

Click [OK].

Go to [Control Panel] [User Accounts] [Change the Way Users Log On and Off].

Uncheck [Use the Welcome Screen] and [Use Fast User Switching]

- 2) Some updates for MS are not install properly?

You cannot install some updates or programs
