Gerry

The lexmark printer function is working fine, but the scanner function is what fails. This product has been uninstalled and reinstalled several times to no avail.

The version of quicken that fails has been uninstalled and reinstalled several times, but still doesn't work. The previous version works fine when reinstalled.

I will try your Autoruns suggestion when I get back to the computer this evening.

Thanks.

Kenn

Application popup: lxbkaiox.exe relates to a Lexmark printer.

Application popup: qw.exe relates to a Quicken product.

What is the status of each on your computer.

If one or both have been uninstalled use Autoruns to safely remove the StartUp items. Otherwise the solution is to uninstall and reinstall through Add / Remove Programs.

A safer way than msconfig to disable / remove unwanted start up items is to use Autoruns.

<http://www.microsoft.com/technet/sysinternals/ProcessesAndThreads/Autoruns.msp>

With Autoruns you can uncheck an item, which disables it from starting, or you can right click an item and then delete it. If you uncheck

Re: Failed to initialize properly (0xc0000034)

you can recheck to re-enable the item. It is a much safer approach than editing the Registry. Another useful feature of the programme is that you can right click an item and select Search Online to get information about the item selected.

Application popup: lxbkaiox.exe – Application Error : The application failed to initialize properly (0xc0000034). Click on OK to terminate the application.

Application popup: qw.exe – Application Error : The application failed to initialize properly (0xc0000034). Click on OK to terminate the application.

Above I have copied in 2 entries from the event log to show the error message that is being presented. Can you help??

Please post a complete copy of the Error Report from Event Viewer.

You can access Event Viewer by selecting Start, Control Panel, Administrative Tools, and Event Viewer.

A tip for posting copies of Error Reports! Run Event Viewer and double click on the error you want to copy. In the window, which

Re: Failed to initialize properly (0xc0000034)

appears is a button resembling two pages. Click the button and close Event Viewer. Now start your message (email) and do a paste into the body of the message. Make sure this is the first paste after exiting from Event Viewer.

I am getting this error message when I try to start several recently installed programs. This began to occur after a Windows XP re-install. How can I get these programs to start up correctly??
