Internet Explorer:

"If you have installed Windows Internet Explorer® 7 or a beta version of Internet Explorer 8, and then install Windows XP SP3, you cannot uninstall Internet Explorer. To avoid this, ensure Internet Explorer 7 or a beta version of Internet Explorer 8 is not installed before installing Windows XP

SP3. If you have already encountered this issue, uninstall Windows XP SP3, uninstall Internet Explorer, and then reinstall Windows XP SP3."

Shenan, if I understand you correctly XP Pro SP3 cannot accomodate any version of IE beyond version 6? So, you uniinstall version to get back to version 6, then update? Reason I'm asking is that the Microsoft Update Web-site made no mention of my needing to uninstall IE 7. I will wait for your reply before I go ahead assume anything, or D/L SP3.

Thanks in advance.
