You are a grubby, little GERM; who will be BANNED from these Newsgroups.
I have contacted your ISP, and your Web Hosting company.
I intend to totally ignore you.
Play with yourself here.
GOODBYE.

So sorry, I am cracking up, the pressure of a poor business year.
I will see a shrink, and get my mind looked at... everything going funny
now. hahahahaha.

Checkmate Mr PaulShit !!!
You lost your Dog (Mick Murphy) He is torn apart in this scam of yours
both.
Do you really believe your utter lie and nonsense of that me impersonating
myself? You are vicious
and malice person. You posted in three Newsgroup (Help and Support,
Security
and Performance and Maintainance
where Mick torn apart to attract simphy for him and left where he started
his malicious game in General Group?
You are trying to recue him since your game didn't go to plan and microsf
will flush you and him into the Loo, so you thought better to pretend to be
the wiseman
and frame me as an impersonator to get your evil plan objectives achieved in
the NG!!!
But your plan got screwed up so now you taking your Dog (Mick) home bye
Micky<g>
You will soon get my resopnce and I promise you, you will not go away with
it but not here in the NG, out.
You should learn how to play chess before you engage in a tactical game Mr
Paulshit!

Download an ISO file from Knoppix to make a Bootable Live CD to recover your Data.

Get it from a mirror of your choice on his next page there.

It is about 696MBs compressed.

Boot from it(it uses your RAM and Graphics, but does not install), and copy your Data to a Flash Drive.

Check to see if you have enough RAM to run it.

Change permissions on FD from read only, so you can copy to it

<http://isorecorder.alexfeinman.com/isorecorder.htm>

And above is a good ISO burner.

It is a shell ext; just right-click on the downloaded ISO file>send Image to CD

Cheers.

Hello

I have a PC running XP professional SP2. I have a offline UPS and due to a power fluctuation, the system restarted 2 times. During the third time, it failed to start up; the monitor went blank and the sytem tried to read from the CD drive.

The problem is I had not made a boot disk/CD and I dont have the original CD with me. How can I download the same for my system configuration ? I had my 80 GB HD partitioned into 4 and I am afraid if I reinstall XP I will lose

RE: Boot disk/CD

all my data on my C: Drive. Is there any solution where I can
boot the sytem
and NOT lose my data on C: Drive.
Please help with this.

Thanks
