1... Click start >> Control Panel >> Double Click Network and Internet Connections >> Double click Internet Options, on the IE Properties window you will see these Options:
General | Security | Privacy | Content | Connections | Programs | Advanced .

Click on General Tab (1st Tab on the left) and you will see a Button called [Clear History ..] click on it to clear your History caches, then click on [Delete Files..] to delete Internet Files created over the time, click on [Delete Cookies...] to delete your cookies left by visiting websites.

Click on Connections tab then click LAN Settings Button, there make sure nothing checked.

= Then try to Disable the Add-Ons on your Browser somehow installed on your browser, On how to disable the Add-ons follow this:

Click on Programs Tab and then click the Manage Add-Ons Button there Disable the None/Not Verified Plug-ins/Add-ons (you need to Renable them one-by-one later and see which is the culprit .

How to manage Add-Ons:

<http://support.microsoft.com/kb/883256>

Click on Advanced Tab and scroll down under the browsing option and uncheck this box:

[&] Browsing

[] Enable Third-Party browser extensions (Req Rest)

RE: display

&] HTTP 1.1 Settings

Use HTTP 1.1 ,= Make sure this checked

Use HTTP 1.1 through proxy connections

If you using proxy check the proxy one if not check only the first one.

Then under Security Option:

[&] Security

Use SSL 2.0

Use SSL 3.0

Use STL 1.0

and click Apply then [OK] to close the IE properties

Scan for malware from here:

SuperAntispyware – Free

<http://www.superantispyware.com/superantispywarefreevspro.html>

= Then Open a run command and type in these DLLs to re-register them:

regsvr32 SOFTPUB.DLL

regsvr32 Wintrust.dll

regsvr32 Mssip32.dll

regsvr32 Initpki.dll

regsvr32 Gpkcsp.dll

regsvr32 Sccbase.dll

regsvr32 Slbcsp.dll

regsvr32 Urlmon.dll

regsvr32 Cryptdlg.dll

regsvr32 Dssenh.dll

regsvr32 Rsaenh.dll

Note you can copy the above and paste in a Notepad and Save As on the

Desktop reg.bat file, double click the icon for the reg.bat and lick [OK]

and then Yes.

Again on the Run command type in:

ipconfig /flushdns click [OK]

ipconfig /renew click [OK]

netsh winsock reset click [OK]

Reboot your machine and see if you can access any website/link easily and

without the cannot connect error message.

or this tool (winsock-Fix) from here:

<http://www.nasstec.co.uk/tools.html>

Reboot your machine and see if you are able to access the secure site!

= Either try to update your windows scripting engine or Java version on your computer, try to uninstall the old Java first.

Windows Script 5.6 Documentation

<http://www.microsoft.com/downloads/details.aspx?FamilyID=01592C48-207D-4BE1-8A76-1C4099D7BBB9&disp>

<http://www.java.com/en/download/index.jsp>

= Open the Windows

Explorer and locate this path:

RE: display

RE: display

C:\Windows\System32\drivers\etc = look in the Right Pane/window for this file called the HOSTS file but not the one with the extension *.SAM* leave this as is.

If you can't see it try to click Tools >> Folder Options and select show Hidden files and folder, then right Click the Hosts file and select open with Notepad.

There see any reference for that site and remove it, you Hosts file will look like this:

```
# 102.54.94.97 rhino.acme.com # Source server
# 38.25.63.10 x.acme.com # Client Host
127.0.0.1 LocalHost
```

Remove all other References other than those above.

You can also try to assign the web address in the trusted zone on the IE properties.

reset Internet Explorer 7:

<http://support.microsoft.com/kb/936213>

Troubleshoot Situations Where You Cannot Connect to Secure Web Sites by Using Internet Explorer in Windows XP
