I need to download Win XP SP2 but I realized Win XP SP3 is already downloaded in my computer. What should I do? Should I removed SP3 first before I download the SP2 or I can DL SP2 without removing SP3? Please help!

I am afraid that some software or application might not work properly if I do this installation...

MS Update won't let you install SP2 if you already have SP3. SP3 includes all of the changes from SP2 as well as subsequent patches.

So, why do you believe that you need SP2?

Jim
