I have set up a Win2000 PC in Norway, and a WinXP PC in Canada. Both with msn messenger 6.1 and a Logitech Quickcam camera (with mic). The 2000 pc can send video and sound. The XP pc can only send video, no sound. I have not activated the builtin firewall in XP. What am I doing wrong?

Please, I have been sent to Norway to work for 4 months, I hoped that I could see and talk to my kids every day without a massive phonebill!
