Hi,

We had terrable trouble with msn messenger 6.2 and 7, just couldn't login after SP2. We tried everything that was posted all over the place with no joy. Couldn't login to secure sites either but according to our settings in IE we should have been ok. I manually downloaded updates from MS updates and in IE Options added 'Use TLS 1.0' under the advanced tab and under security. Now getting login with messenger 7 and IE for secure sites like internet banking. I do not know if this is of any help but check it and see if you are needing any updates just incase there is a patch for something that is causing this horrible problem.

best of luck.

Andrew
