Dear Guys

Have similar problem here:

After checking email (LOGIN is ok) doing the logout the IE6 crashes my P4 300 Mhz with WXP Pro, Loading the taskmgr I can get partial control back but mouse double click over desktop icons change into a right click, keyboard stops typing. Close taskmgr and open it again and keyboard starts working, after a long time, time enough to find this forum, etc everything is back in place... BUT

If I login start all over the issue.. the page apparently locks is related to something like a cookie.

Thnks
MATias
