Because my Windows Messenger 5.1 has been anything but working correctly...shutting down and restating whenever and not functioning at all sometimes...I decided to install Windows Live Messenger.

My question is: Do I have to keep Windows Messenger 5.1 for any reason? Is Live Messenger an MSN thing or a Windows thing...and I've never understood the difference...anyway...do I need to keep my 5.1 around? ... and if so...why please?

Thanks Tim
