It plays DivX and XviD, which are variants of .AVI, and "hacks" to play other .avi formats. There are forums for this player and the hacks and firmware changes that are available...such as removing macrovision, output in PAL or NTSC, etc. It has numerous options for widescreen formats: 16:9, 2.35:1, and a couple variations on 4:3 pulldowns. It is a very flexible machine with flashable ROM which allows experimentation with it.

If anyone is interested in the links, I can post them here...
