ok right i am 14 years old and i dont know much about pcs  
anyway it has always been like this and i am sick and tired of it so i  
posted it.  
i tired to install 2.1 but i when i try it says something about my net  
settings and what to do. i try that and it doesnt work, so i cant  
download any patches or updates.  
and i didnt know you needed details of my pc

system:  
microsoft windows xp  
professional  
version 2002  
service pack 2

computer:  
AMD althlon(tm) XP 2400+  
2.00ghz 768 mb of ram

i dont know if thats what you need

Hi,

Are you having any other major problems with your PC?

I note you have XP pro, and an odd configure 768 ram,

(have you recently added 256 to the spare slot?)

but an excellent FSB of 2ghz?

As for the installation of 2.1(?), where was this from?

What exactly is the displayed onscreen error: "something  
about my net settings and what to do" – "but dosen't work"?

The very *\*exact\** details of that error message could be  
very helpful in solving the problem.

You also typed you can't "download patches nor updates"?

Is this a specific problem with the MS Windows Update site?

I have a feeling your problems maybe a little more far reaching  
than just with WMM?

Is it a legit and valid install of XP pro?

Re: HELP me if you can = (

Take care.
