see i tried that i made it WMV file and still it had the same issues. it says somethnig about a media make DLL error or something in the log it shows. and i managed to make the vide by being VERY tempermental, restarting alot and putting up with saving every cut i make and then having it crash soon after.

now my problem lies in saving, EVERY time it 37% it pops out a media error again and would i like to send an error report again or not. thats all it does, every format i save in, every size hits 37% and dies. it did pop up a random few times DrWatson Postmortam Debugger error 'send error report or not' message for that. then sending not sending it brings up another for movie maker after.

-. all i want to do is save my god damn movie and i cant. any ideas?

MM does not work well with Mpegs, so forget using them.
avi is just a wrapper so can contain many file types, you need to find out which. dv-avi is the only one which does work. avi's like divx, xvid etc don't work.

try converting your movies to dv-avi or wmv.

ok i have tried many times to drag drop/import my video file i want to edit,

Re: Movie maker just keeps crashing

i have it in .mpg and .avi format, both do the same thing. when i start to cut the .avi file to the music and chop it about movie maker pops up the 'send error report' message, closes the program i lose my file and editing.

if i manage to save before it does this, the saved file on loading, pops up the same error and crashes like before. on cutting the mpg file, it decides not to let me scan through the film on the slider, so i can't see where i'm cutting at all, and won't play if i click elsewhere on the slider, EVEN if i press stop and it goes to the start, it then refuses to play. Then it freezes, and shuts down.

Now the thing is, this program used to work perfectly fine for me, i've made previous videos same formats, no troubles at all, none whatsoever, yet now it's doing this? crashing every damn second i'm in it with this one movie? i have more than enough in terms of specs, i just updated my ram and everything, and it worked perfectly fine with less ram!

please help it's becoming tiresome and very irritating now.

Thank you for your time.

Rxx
