*>Ok I have just reinstalled windows and somehow the crafty shit has wormed
>its way onto my machine already. Its been picked up by zone alarm trying to
>get at the internet when it isnt even running. Anyhow, whats the best way
>to uninstall it? I know the uninstaller doesnt really uninstall it and I
>know from past experience that deleting all its directories and registry
>entries will get rid of it for a couple of days before it reinstalls itself.
>I need to get rid of it and prevent it from ever returning and hopefully
>kill the brainless wankers that wrote it.
>*

RealPlayer does not install itself! I have used it since 1998, and have never had any problems with it. It does have a program running in the background to check for the default media file types being changed by other programs, but you can disable that. With RealPlayer 10, you can also disable the message center.
