Break the problem down thus:

1. Record audio from microphone etc
2. (Optional) – mix it with existing music
3. (Optional) Convert audio file to another format
4. Burn a CD

Programs like Audacity (audacity.sourceforge.net) will help you with the first steps but you can just google for alternates e.g. "recording software".

Mike

PS Don't piggyback onto unrelated posts.

I have a CD burner and would like to add my voice over the music, as in Karaoke, then burn a new CD. Is this possible and where do I start.
Thanks.

I have a voice recorder on an MP3 player which records in 32K .wav, 8K .act, 32K .vor, 8K .vor. I purchased this because I was told that .wav was universal and could be copied to my computer and burned to CD to be played on my CD player. I need to transfer recorded 32K .wav files to

Re: Voice over Music CD

audio CD.
WMP
will play 32K .wav files but says "may not fit" and since the
8 songs I
wish
to burn are maybe 30 minutes of music, I figured they should
fit. So I
pressed start burn. WMP then tells me that "an error
occurred!". I
also
have CD & DVD Maker Gold which tells me that it doesn't
support 32K
.wav
files – only 16K .wav files.

Can someone help with a solution either to change 32K .wav
to 16K .wav
for a
struggling student?
