Hello

I am not sure if I can help, have you checked your Local Area Connection Properties to make sure Client for MS Networks>File and Print Sharing>Internet Protocol(TCP/IP) is installed, I also have NWLink NetBios>NWLink IPX/SPX installed on mine and it allows me to access my network with the firewalls on, I also have it set to obtain IP address automatically, obtain DNS server automatically, you might try this website if all else fails.

Hope this helps
Haus
