I'm using XP pro, I have the network setup with the same workgroup name and I can see the share folders on each of the computers but get an error message when I try to transfer files from my laptop to my desktop:

\\xxxxx\xx Pics is not accessible. You might not have permission to use this network resource. Contact the administrator of this server to find out if you have access permissions.

Not enough server storage is available to process this command.

What server? and I am the administrator and haven't put anything special to access the network. I share an internet connection and the ICF isn't set.  
Any Ideas? Thanks JusMe
