"Not enough server storage is available to process this command." error.

**SYMPTOMS:** When accessing shares on a server from a client, you may receive "Not enough server storage is available to process this command." error. You may receive this message and Event ID: 2011 after you install Norton Antivirus for Windows.

**Resolution:**

- 1) The registry value IRPStackSize may be not explicitly present. To increase the value of the parameter, go to the key HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Services\LanmanServer\Parameters. If the key is not present, choose Add Value in the Registry Editor. The Value Name should be IRPStackSize and the Data Type is REG\_DWORD.
- 2) Remove any unnecessary entries from this value in the registry, HKEY\_LOCAL\_MACHINE\System\CurrentControlSet\Services\LanmanServer\Parameters\NullSessionPipes.
- 3) If the machine has a non-zero PagedPoolSize in the Registry, you need to re-set it by going to HKEY\_LOCALMACHINE\SYSTEM\CurrentControlSet\Control\Session Manager\Memory Management and double-click on PagedPoolSize and set to 0.
- 4) Disable Norton antivirus to see if that will fix the problem.
