Hey All

I have an MN-100 Wired router, and am running a VPN server from Windows XP (it is the Windows XP one, waiting for incoming connections, not a 3rd party) and trying to have my friend connect to me. I am running a Westell Dual Connect 2200 DSL modem for internet. Anyway, my problem could be numerous things, but things I'd like to know are: what ports (and if they are TCP/UDP) need to be open to make the server available to someone else through the internet. Also, on the client side (the person trying to connect to me) what ports would need to be opened? Its getting aggravating b/c every time my friend tries to connect to me, he gets the error 800 saying he couldn't connect ... suggestions??? ALL help is appreciated!!!!

Sincerely,
Ryan
