this may help. quoted from <http://www.ChicagoTech.net>
How to setup home or peer-to-peer network

If all of the computers in a peer-to-peer workgroup don't have a common networking protocol, a common workgroup, and common user names and passwords, the computers may experience a difficulty to communicate with other computers that are running Windows 2000, Microsoft Windows 95, or Microsoft Windows 98. To resolve this issue, configure the computers by ensuring that they have a common networking protocol (TCP/IP), a common workgroup, and common user names and passwords. Also make sure enable File and Printer Sharing is installed.
