Ok any help would be greatly appreciated!!

first problem I have is on my main computer (one running xp home and the internet connections) keeps saying I don't have permission to use MSHOME. to contact the administrator to get access premission. How do I check my permissions?

Second problem. I have tried reinstalling my network using the network wizard. But I keep getting an error message and to try installing the network manually. How do I do this?

My other two computers are connected adn working. but my second problem is my windows ME computer keeps asking for a password. how do I turn this off. I have never set a password so don't know what the passwork is wants is.

Any help on these three problems would be great!!!

Thank you so much.

Wendy
