Undertaker,

Here are a couple websites with useful tutorials about internet connection sharing:

<http://www.cablesense.com/>

<http://www.homenethelp.com/>

If that doesn't help, provide make and model of the router, and ipconfig data for all three PCs, and we'll try to help you further.

Start – Run – "cmd". Type "ipconfig /all >c:\ipconfig.txt" into the command window – Open c:\ipconfig.txt in Notepad, copy and paste into your next post. Identify operating system (by name and version) with each ipconfig listing.

And please don't contribute to the spread and success of email address mining viruses. Learn to munge your email address properly, to keep yourself a bit safer when posting to open forums. Protect yourself and the rest of the internet – never post your address unmunged.
