Hi, Does the folder belong to your user account?

You may also want to check the following:

- Click Start, and then click Control Panel.
- Click Performance and Maintenance, click Administrative Tools, expand Services and Applications, and then double-click Services.
- Right-click the Server service, and then click Start.

What is the sharing status of the folder?

>*On a small home workgroup of XP Pro & Home systems,*
using a 4 node hub, a "grayed out" check in the 'Make this folder private' check box is preventing me (the administrator) from unchecking the box. I beleive it is preventing me from allowing some files to be copied between members of the workgroup. How do I remove the check from that box?
