I have been locked out of my router. My housemate was a bit impatient with the submit button when resetting the router back to factory defaults ! (Just got it up an runnin right). It kicked him out and when he tried to log on the default account and password would not be accepted (neither would the only other password weve used). Now the router config page aint found (10.0.0.2), so I cant access the router settings. the WAN is down aswell. I tried installing it on USB and it isnt detected at all ? The LAN appears to be functioning fine..

How can I access the Router ?
