On any XP Pro computer, check to see if Simple File Sharing (Control Panel – Folder Options – View – Advanced settings) is enabled or disabled. With XP Pro, you need to have the SFS settings properly set on each computer.

With XP Pro, if SFS is disabled, check the Local Security Policy (Control Panel – Administrative Tools). Under Local Policies – Security Options, look at "Network access: Sharing and security model", and ensure it's set to "Classic – local users authenticate as themselves".

With XP Pro, if you set the Local Security Policy to "Guest only", make sure that the Guest account is enabled, thru Local User Manager (Start – Run – "lusrmgr.msc"). If "Classic", setup and use a common non-Guest account, with identical, non-blank, password on both computers.

For XP Pro with Simple File Sharing enabled, make sure that the Guest account is enabled, using the Local User Manager (Start – Run – "lusrmgr.msc").

Whichever you choose to use on the XP computer (Guest or non-Guest), set a non-blank password on the account there. Then use that same account, with identical password, when logging in to the Win 98 computer.

The answers are in this Microsoft article:

BTW, folks can help you a lot easier if you reply in the same article (same Subject) for continuing assistance.

Cheers,

Chuck

Paranoia comes from experience – and is not necessarily a bad thing.
