Hello I am having trouble installing a wireless pcmcia network adaptor model

D-link DWL-650+ on XP Pro on a NEC M320 LAPTOP.

When I try to install the driver while I have inserted the PCMCIA card, at the end of the driver installation XP freezes, and the only thing I can do is RESET the laptop, then XP loads up to the the boot screen

with the XP logo on it, and freezes. I have to RESET and go into safe mode and do a system

restore in order for me to get into windows again. The same card is working on another

laptop that has windows 98. I have tried all the various versions of the drivers the one that came on the CD and the latest one on the dlink.com site.

This product says its compatible with windows XP, so my conclusion is that there is some

kind of hardware conflict with the pcmcia card and the laptop. On the support of the network card I

see that some laptops have problems with this card.

The PCMCIA slot is 32 bit compilant

How can I resolve this issue?

This is very strange and dissapointing... please any assistance would be usefull

Thanks in advance
