<SNIP much cleaner IPConfigs>

Fred,

OK, that looks much better.

Now, do you have the following enabled on both computers:

- Client for Microsoft Networks
- File and Printer Sharing for Microsoft Networks
- NetBIOS Over TCP/IP

Do both computers still have connectivity?

>From each computer, test shares visibility. In a command window, run "net view @target", substituting for @target:

- 1) This computer name.
- 2) This computer IP address.
- 3) Other computer name.
- 4) Other computer IP address.

Report visibility of shares / exact error displayed in each test (8 tests total).

Cheers,

Chuck

Paranoia comes from experience – and is not necessarily a bad thing.
