Seacon,

On a network winch uses DNS solely to locate resources, you have to setup your domain, and DNS infrastructure, precisely.

<<http://nitecruZR.blogspot.com/2005/05/windows-xp-on-nt-domain.html>>

If you can run "browstat status" and "ipconfig /all", from 2 or preferably 3 computers, and post the results here, we can help you identify the problem. This article will explain how to provide both diagnostics. The more details about your network that you can provide, the better chance of identifying the problem.

<<http://nitecruZR.blogspot.com/2005/05/troubleshooting-network-neighborhood.html#AskingForHelp>>

Or, you may benefit from reading this troubleshooting list, and resolving each problem found.
