Fix for Running Winpak 2 version 4 on Windows XP machine with Service Pack 2

START
RUN
Regedit
Navigate to
HKEY_LOCAL_MACHINE
SOFTWARE
POLICIES
MICROSOFT
WINDOWS NT

And if there is no key for RPC, create one
Then click anywhere in the RPC window and CREATE New DWord value
Call the new name RestrictRemoteClients and then double click and make sure the value is 0

Exit out of the registry

Right click on MY COMPUTER and click PROPERTIES
Click on COMPUTER NAME, then CHANGE
Then click on MORE
And if there is something in the box for PRIMARY DNS SUFFIX FOR THIS COMPUTER, remove it and OK out of the menus and RESTART THE COMPUTER
