Have a little problem with Windows XP. I can see all three computers in my network, but i cannot access them, i keep getting a "You might not have permission to access this resource" or something like that. On my "DATA" computer i can access "Games", but on "Games" i cannot access "Main". On "Main" I cannot access either "Games" nor "Data". Here is my setup:

```
Lynksys 4 port router
|
--- Main (Internet Access Available) - 2 USB 160 GB Ext HD's
|
--- Games ---(Internet Access Available)
|
--- Data ---(Internet Access Available)
```

Any Suggestions Would Be Greatly Appreciated

Brian,

Re: Network Seen, but not accessible

One of the most common causes of this problem would be a misconfigured or overlooked personal firewall, but there are other possibilities too. What antivirus products do you use?

If no help yet, provide "browstat status" and "ipconfig /all" from each computer, so we can diagnose the problem. Read this article, and linked articles, and follow instructions precisely:

Identify each computer with more detail please.

3. How does each network device connect together? all three connect via ethernet to a Lynksys 4 port router which is connected to my cable modem. all three have Internet access.

Operating Systems: DATA and Games are XP Pro and Neoknight is XP Home Edition SP2 full updates installed. Neoknight is my main computer and basically the only reason i need to see the other two is just for their hard drives.

hope i got everything ya needed
