Bummer.. today at bootup on the WinME pc, I don't even see the WinME pc in  
the "Entire Network" folder! It use to be there. Prior to that, I disabled  
the Browse Master. Hmm.. I'll put that back to Automatic.

Thanks Chuck! Here's "ipconfig /all" for the WinME pc:

<SNIP>

Will any of this actually help?

Can't hurt. I see no extraneous protocols or transports.

So you say that you're re enabling the Browse Master on WinME. If so, did you  
disable the Browser service on TheRoze? You shouldn't have both.

Now, besides the browser service issue, and firewalls, there are several

## Re: can't see WinME on XP

settings that could cause your problem. Go thru my troubleshooting guide, which provides links to other issues that you need to consider, here are but 2 examples.

# Check for an anonymous access restriction. Any computer which restricts anonymous access can't be enumerated by the browser.

# Check for an invisibility restriction. Any computer that makes itself totally invisible can't be seen by the browser, or any other means.
