My kids new Dell has always been connected to the web via
our wireless
network. everything hardware wise looks okay but I keep
getting the acquiring
network address message.

I'm able to take the hawkin G hwu54g mini wireless g usb
2.0 adapter and use
it okay with other computers. In fact, the Dell tells me that
the connection
between it & the linksys wireless g router are fine. I can see
it on the
Hawking G console.

What setting got hammered that is causing the acquiring
network address error?

Thanks.

Lew

Lew,

Is the router broadcasting the SSID?

Re: acquiring network address

Do you have neighbours? Do you have any idea what WiFi your neighbours are

using? Have you done a WiFi site survey using NetStumbler?

<http://nitecruzr.blogspot.com/2005/05/essential-tools-for-desktop-and.html#NetStumbler>

Have YOU made any changes in your network recently?
