Thanks Chuck!... I made sure that all services and components needed are OK on Computer A (good one) and Computer B (bad one)& I can't make NetBT run on computer B, going via Windows the Enable NetBios over TCP-IP checkbox is checked but going through the command windows it is disabled ("ipconfig /all")& I downloaded the PSTools and here's the cpsserv.txt for each computer&

Computer A (good one LEVC)
Start CPSServ V1.02 - LEVC

Find Computer Browser ("browser")
Checking \\LEVC... Found browser on:
\\LEVC

Find TCP/IP NetBIOS Helper ("lmhosts")
Checking \\LEVC... Found lmhosts on:
\\LEVC

Re: Can't see a computer in the network

Find Remote Registry ("remoteregistry")
Checking \\LEVC... Found remoteregistry
on:
\\LEVC

Find Server ("server")
Checking \\LEVC... No active service
named server found.

Find WF / ICS ("sharedaccess")
Checking \\LEVC... No active service
named sharedaccess found.

Find Workstation ("workstation")
Checking \\LEVC... No active service
named workstation found.

End CPSServ V1.02 LEVC
