I can release and renew and it works.
tried pinging yahoo.com after that and I get the Request timed out error. I
get the same error when I try to ping my local Linksys box 192.168.1.1. I
will try to reload the drive and see if that helps. If that doesn't the only
thing left that I can think of is a wipe and full reinstall.

thanks,
charles....

Hi,

It sounds like there could be a corrupt driver issue, try to uninstall it
from device manager, then reboot & let it re-install to see if it resolves
the dns problem

Also the fact that it says unknown, instead of Broadcast, seems like it
isn't going through the regular network channels..

Are you able to release & renew your IP?

Regards,

JC

One step closer to the edge...

"shultzjr" wrote:

After I type in "ipconfig/flushdns" I get:
Successfully flushed the DNS Resolver Cache
then I fire up IE and it tries to go to 64.233.179.99 google.com for a while
and then I get another dns error.

RE: Can't browse, can't ping, can't tracert?

anything else?

charles.....

Hi,

Have you tried flushing the DNS resolver cache?

IPCONFIG /FLUSHDNS

Hi all,

I have an XP Home machine that gives me a dns error whenever I try to use IE6. I have tried two different ways to connect to the Internet: one through my local lan and two through a dialup connection. Both give the same errors. I have other machines on my lan that access the Internet just fine. The only difference in IPCONFIG/ALL is that the node type is UNKNOWN instead of BROADCAST, compared to a Win2000Pro machine that works correctly. I can't even ping the local router 192.168.0.1 gives request timed out. I know the cable is good since it works in other machines. (driver problem?) The automatic dhcp is set correctly and when connected to my lan the ip

RE: Can't browse, can't ping, can't tracert?

address is setting correctly but when I try to ping yahoo.com for instance, I get a request timed out error. This happens with either the dialup connection or the lan connection. I think that the dhcp client is corrupted but I don't know how to replace it. Any ideas? Oh, it is SP1.

thanks,
charles.....
