Re: No files showing

some  
one  
help  
with  
this  
also  
direct  
me  
on  
how  
to  
share  
fromm  
computer  
to  
computer  
in  
the  
same  
home?

Stacey,

Are you  
really  
getting  
"limited or  
no  
Conductivity"  
on the  
laptop,  
while still  
actually  
surfing the  
Internet?

<http://nitecruZR.blogspot.com/2005/07/limited-or-no-connectivity.html>  
<http://nitecruZR.blogspot.com/2005/07/limited-or-no-connectivity.html>

Let's start  
by looking  
at "ipconfig  
/all" from  
both  
computers.

<http://nitecruZR.blogspot.com/2005/05/reading-ipconfig-and-diagnosing-network-problems.html>

Re: No files showing

Thanks Chuck for replying, I have had the new Dell for about 3 months and I have nothing but problems with this wireless. The router is a Dlink 524, from Dell and I could not connect to the internet from the main computer. I was on the phone with Dlink Dell and my ISP for a month and a half for hours and hours. They would all do their ping test and say it was ok on their end so call somebody else. Finally Dlink was able to change some settings and get the primary pc up and running but it would disconnect often so they gave me a static ip address and it seemed to help, now it only disconnect once and a while. So now this is working ok I set up the second pc and was doing some sharing once or twice, but now I am getting that error so maybe I have to reset it all and start from new with some one that can actually help. Yes my DHCP client service is running.

Hi Stacey,

OK, be patient with me and try to identify the scope of the problem. Please spend a few minutes, and read my tutorial about solving network problems.

<<http://nitecruzr.blogspot.com/2005/08/solving-network-problems-tutorial.html>>  
<http://nitecruzr.blogspot.com/2005/08/solving-network-problems-tutorial.html>

And about providing details about your network.

Paranoia is not a problem, when it's a normal response from experience.

My email is AT DOT

actual address pchuck mvps org.

Hi Chuck, I would to start off by Saying "Oh My Lord" I Have Been reading and reading and I still haven't broke the ice on what I need to know and I can see it will take a very long time for me to learn a fraction of it. I have picked up a few things and I will try and follow as we go to solve my problems. I do want to say that I dont feel that I was lead in the right direction before when setting up my home network because some things were not in your guide lines to do and also some were in your not to do. So to start over I have 2 computers 1 Dell xp Pro(primary) that is wired through a router and broadband modem and the second is a Dell xp Home and both are desk tops. The second is 20 ft away and will be used for my daughter to access the internet and to share files and printers. I have tried 3 different routers and cables thinking it maybe hardware but same problem and also if I disconnect the router and wire direct into modem things work perfect, that is why for the three routers. My opinion, which is only 2 cents because of my lack of knowledge, it has to be in the settings of the computers. Dell, Dlink, and ISP will not even touch this with me they allsay the part is working fine. So I hope I gave you

Re: No files showing

enough to help me in solving this? Thanks Stacey

OK, Stacey,

That's a good start. Now let's look at "ipconfig /all" (see above article) from the computers.

OK Chuck I just want to confirm something I read on your site to be sure before I go ahead. I can publish my ipconfig info online without threat of somebody getting into my PC?

Stacey,

You are behind a NAT router. The public IP address (of the router) won't be included in an ipconfig log. None of the information in an ipconfig log will be useful to a bad guy, without your public IP address.
