unfortunately its working on a deeper level so a basic netstat and tools like netlimiter dont see its traffic.
I was expecting that there is nothing but it was worth a try :)

thanks

Hello,

I cant find any tools for the Windows XP Internet Connection Sharing. I was looking for some logging, reporting, monitoring tools but couldnt find anything.

Now i wonder if there are any tools at all that somehow give a benefit to ICS.

I really enjoy using it and dont want to use something else but its a blackbox that is either On or Off and i would like some more info/control.

Thanks
Thorsten

Hi Thorsten,

ICS is just that. A blackbox. You can run diagnostics on the computer itself, but that's it.
