Microsoft documents predefined group names, because that's how you start out. If you change the groups, you gotta change the group designations. Did you check both LSP lists?

"Deny access to this computer from the network".

"Access this computer from the network".

Is Simple File Sharing Enabled, or Disabled, on the Desktop?

<http://nitecruZR.blogspot.com/2005/06/file-sharing-under-windows-xp.html#Guest>

I'm afraid this does not make things clearer. I checked my options and found that I am using simple file sharing (which is fine for now, since no one else uses these machines).

According to the reference you gave, I should be fine if "Guest" is not in the "Denied" list and "Everyone" is in the "Access" list. That is the case, yet the portable computer cannot use files on the desktop computer.

"Access this computer from the network" contains: Everyone, ASPNET.

"Deny access to this computer from the network" contains:
SUPPORT_38895a0.
