Why is it that web browsing with Internet Explorer 7.0.5730.11 and Mozilla Firefox 2.0.0.3 becomes impossible after an hour or so with both of my laptops having Windows XP Home Edition SP2 and ZoneAlarm 7.0.337.000, but I still can listen to net radio channels (with 128 kbps bitrate) with Winamp 5.35? Both laptops have different manufacturers (HP and Fujitsu Siemens) and I'm using an ADSL modem (ZyXEL Prestige 660R-61), a wireless router (D-Link DI-524UP) and a UPS (MGE Protection Center 500). I don't use the wireless connection much. If I recall correctly, the other laptop started having the same problems after some Windows/Microsoft update, but I'm not sure if it's an update that started causing the problems.

First download these Anti-Malware at the bottom of this post with the free AVG Anti-virus and installed them on your Computer and update their definitions.

Go through these cleaning steps:

1... Click start >> Control Panel >> Double Click Network and Internet Connections >> Double click Internet Options, on the IE Properties window you will see these Options:

General | Security | Privacy | Content | Connections | Programs
| Advanced .

Click on General Tab (1st Tab on the left) and you will see a Button called [Clear History ..] click on it to clear your History caches, then click on [Delete Files..] to delete Internet Files created over the time, click on [Delete Cookies...] to delete your cookies left by visiting websites.

= Then try to Disable the Add-Ons on your Browser somehow installed on your browser, On how to disable the Add-ons follow this:

Click on Programs Tab and then click the Manage Add-Ons Button there Disable the None/Not Verified Plug-ins/Add-ons (you need to Renable them one-by-one later and see which is the culprit or you can send them here in your next

RE: Web Browsing Not Possible Always

post) and click [OK] to confirm your Changes.

Click on Advanced Tab and scroll down under the browsing option and uncheck this box:

Browsing

Enable Third-Party browser extensions (Req Rest) and click Apply then OK to close your IE Properties.

2.... And also for malwares from here:

http://www.lavasoft.com/products/ad-aware_se_personal.php

<http://www.safer-networking.org> ; for Spybot S&D

Download and install after installing this software and

update then run a scan in both safe mode and normal:

<http://free.grisoft.com/doc/5390/lng/us/tpl/v5>

Run Disk cleanUp and Defrag again in safe mode

Open a run command and type in:

ipconfig /flushdns click [Ok]

ipconfig /renew click [OK]

netsh winsock reset click [OK]

or download the winsock fixer from here:

<http://www.nasstec.co.uk/tools.html>

Note: repairing the winsock the same as the command (netsh winsock reset),

both repair the winsock.

HTH.
