Hi Bob,

I'm a little confused since I'm not a network pro. Both machines have the same user name and password. I did this because in the past I had the exact same problem and by doing it this way there was no issues.

In reading the information you provided, it looks like I have to call Microsoft for the hotfix? Perhaps I'm not understanding what the documentation is telling me.

Michael

Here's the problem. I have 2 computers. The main one is running Windows XP Pro and the other Windows 2000. I have had access to both computers with no problem until July 10th when security updates were installed by auto update. I have checked all configurations and even redone them to no avail. When I try to map drives or access the XP computer through the 2000 computer, the "Enter Network Password" box with a message " Incorrect password or unknown username for \\computer name.

Re: My Network Places and loss of access

When I check the security log in the event viewer on the XP computer it shows the following:

Event Type: Failure Audit  
Event Source: Security  
Event Category: Logon/Logoff  
Event ID: 529  
Date: 7/20/2007  
Time: 7:33:51 AM  
User: NT AUTHORITY\SYSTEM  
Computer: MFMASTER  
Description:  
Logon Failure:  
Reason: Unknown user name or bad password  
User Name: Michael  
Domain: MICHAELF  
Logon Type: 3  
Logon Process: NtLmSsp  
Authentication Package: MICROSOFT\_AUTHENTICATION\_PACKAGE\_V1\_0  
Workstation Name: MICHAELF

Sometimes the Logon Type is a 2

I am at a total loss. Yesterday I rebuilt the Windows 2000 computer thinking something had become corrupt but that wasn't the case. Then common sense told me it was something on the Windows XP that was blocking it. I also turned off all security temporarily and that didn't work. Tried setting up a new user on both and that didn't work.

Please HELP!

Thanks  
Michael
