Thanks. I'll give it a try, but I seem I'm probably in the wrong place. ....network\_web. I guess this hasn't got a lot to do with LANs.

Ian wrote:

Try mapping drives with:

```
net use z: \\machinename\sharename
```

or

```
net use z: \\10.0.0.123\sharename
```

(substitute correct names and/or IP address, of course.)

Much more reliable than Network Places.
