I got it to work, when the username and password comes up to login, I had to type in the workstation name before the user id, "wkstID/username" then I got in OK.

I can not thank you enough for your help on this issue.

I do have another issue though, I have a 16 bit app that runs from a command prompt, to make this full screen at the WS I do a ALT+ENTER, I can not seem to do this while in remote mode, I thought that their was a way to do this.

Once again TYVM,,

Steve

The ISP is Bellsouth or ATT now, the Modem has NAT and other features but not enabled, the modem is a Westel 6200, On the LAN I have 3 computers attached via hub which gets a DHCP address from the modem, 1 laptop running Win2K and the others are desktops WinXP pro. I did do a netstat =a and port 3390 is listening.

Thanks again

Re: Remote Desktop Connection

news:D025CC22-C263-4B3C-9F48-C8B030DCFD54@xxxxxxxxxxxxxxxxxxxx

sorry if this is a double post,

I am still having connection problems.  
Since I have DSL at the host I downloaded  
and installed on the host the  
No-IP software, this connects and resolves,  
created the host which attaches to my DSL's  
IP address. I opened ports  
on  
my  
firewall TrendMicros PC-cilin 80 and 3389,  
but the remote computer can  
not  
connect. I have disable the firewall on the  
host all together and still  
no  
connection. I did add the user name to the  
host's remote connection  
option  
with admin rights, in my network setup  
(host) i have TCP/IP only no  
netbios  
as protocols. I have enable logging at the  
host PC and it shows no  
activity  
as to attempts for the remote computer to  
login.

Its possible the DSL modem is also a router. If so you need  
to put the  
modem  
into a bridge or pass through mode. What modem and what  
ISP? You may have  
to  
contact your ISP for help if the modem was configured by  
them. At the  
very  
least check the modem manufacturers support pages or the  
users manual for  
help doing that. You can test to see if TCP Port 3389 is being  
blocked by  
going to the <http://www.canyouseeme.org> site while logged  
onto the host  
PC.
